FUNCTION: THIS GIANT MUSCLE PROTEIN MAY BE INVOLVED IN MUSCLE PROTEIN FUNCTION: THIS GIANT MUSCLE PROTEIN E STRUCTURAL INTEGRITY OF ASSEMBLY AND IN MAINTAINING THE STRUCTURAL INTEGRITY OF SARCOMERES. MAY HAVE PROTEIN KINASE ACTIVITY.

ALTERNATIVE PRODUCTS: A NUMBER OF FORMS OF THIS PROTEIN ARE PRODUCED BY ALTERNATIVE SPLICING WHICH DIFFER IN TISSUE DISTRIBUTION. DIFFERENT SIZE TRANSCRIPTS MAY ALSO EXIST WITHIN ONE TISSUE. THE SEQUENCE SHOWN HERE IS THAT OF THE HEART ISOFOFORD

                                                          is the number of results predicted by chance to have a ater than or equal to the score of the result being printed, rived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-185908-1B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression mount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antidiabetic; hypotensive; dermatological; immunosuppressive; antilnflammatory; antibacterial; antiviral; antivingal; antirheumatic; antithyrold; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus; fyraft vs host disease, cardiovascular disease, diabetes mellitus; hyporthematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobhouria, antiinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have actlyities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;

                                                                                                                                                                                                                                                                    CC acid synthetase. The sequences are useful as reagents for the CC differential identification of the tissues or cell types present in a CC biological sample, as immunological probes, for treating a disease or CC condition resulting from under expression of such polypeptide, for the CC detection and/or treatment of disorders involving aberrant glycolysis, Cc e.g. cramps, myoglobinuria, and as tumour marker and/or immunotherapy CC targets. They may also be used to differentiate, proliferate and attract characteristics (e.g. in cosmetic surger) or mammalian metabolism CC characteristics (e.g. in cosmetic surger) or mammalian metabolism additive or preservative. The proteins can be used to assay protein CC levels in a sample, as a marker or detector of an immune system disorder, to inhibit cytokine activity, and as a vaccine. They may further be used to treat immune system or of haematopoletic cell deficiencies or CC disorders, blood coagulation disorders (e.g. afibrinogenaemia), blood coagulation disorders (e.g. afibrinogenaemia), blood coagulation disorders (e.g. afibrinogenaemia), blood coagulation disorders (e.g. afibrinogenaemia), blood coagulation disorders (e.g. afibrinogenaemia), blood cogulation disorders (e.g. afibrinogenaemia), blood cogulation graft-versus-host disease, inflammation, CC disease, allergic encephalomyelitis), allergic reactions (e.g. asthma), CC diseases caused by viruses (e.g. hepatitis, meningitis, sepsis, typhoid, CC diseases caused by viruses (e.g. hepatitis, sepsis, typhoid, CC diseases, coccidiosis, leishmaniasis, scables, malaria, toxoplasmosis).
                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a human glycosylation enzyme clone of the invention, designated HWLLM34. This protein clone is a CMP stalic

                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and thrompy drug screening, and the property of the control of the sectivity of the cattivity of the control of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity of the sectivity. The specification describes a method for manipulating carbohydrate processing pathways in cells of interest. The methods are used to manipulate multiple pathways involved with the sialylation reaction by using recombinant DNA technology and substrate feeding approaches to cenable the production of sialylated glycoproteins in the cells. The sialylation process involves the post-translational addition of the color substrate cytidine monophosphate-stalic acid (CMP-SA) onto a specific acceptor carbohydrate. The cells express at least one enzyme, caldolase, CMP-SA synthetase and CMP-SA transporter, above endogenous levels. The cells are useful for producing complex sialylated glycoproteins in cells of interest, especially insect cells. Cellsoproteins containing stalylated oligosaccharides are useful as calls of interest, especially insect cells. Stalylated stalylated glycoproteins and diagnostic tools. Cells producing complex stalylated of stalylated glycoproteins are useful for enhancing the value of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the polynucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            heterologous expression systems and increasing the application of heterologous cell expression products as vaccines, therapeutics and diagnostic tools as well as increasing the variety of heterologous proteins that can be produced and lowering blotechnology production costs. The present sequence represents a human CMP-SA synthetase, where the production costs is the present sequence represents a human CMP-SA synthetase, where the present sequence represents a human CMP-SA synthetase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

'antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating.
                                                                                                                      AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antiatabletic; antiasthmatic; antirheumatic; antiarthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632
                                                                                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiinflammatory; antithyroid; antiallergic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer - \!\!\!\!
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis;

A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation;
AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAY01602 and AAY11994 to AAY12260, respectively. The proteins given represent the
                                                                     Claim 34;
                                                                                                    New nucleic acids encoding cDNA libraries prepared from muscle, muscle and heart ti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell cartivity, tissue growth regulating activity, haematopoiesis regulating activity, receptor/ligand activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide into a membrane, or importing a polypeptide into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the CC la genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tunours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC parkinson's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, and epithelial cell proliferation, to prevent skin ageing due to sunburn, to maintain organs before transplantation, for supporting cell counture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and CC immunosorbent assay (ELISA). The present sequence represents a human CC secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QΥ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in gene therapy. A composition containing a polypoptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity schemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                        A AAD08488-AAD08529 represent cDNAs corresponding to 18 human secreted CC AAE04240-AAE04297 represent human secreted protein fragments or variants. CC The secreted proteins and their genes are useful for preventing. CC The secreted proteins and their genes are useful for preventing. CC treating or amcliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, and infections. The proteins can also be used to aid wound the healing and epithelial cell proliferation, to prevent skin ageing due to compate ligands or binding partners, and inchemotaxis, and can be used in alleviating symptoms associated with the disorders mentioned above, and compate immunessays e.g., radiommunoassay or enzyme linked CC antibodics specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and CC immunosorbent assay (ELISA). The present sequence represents a human cC secreted protein fragment referred to in the disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                     AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for CC human secreted proteins, and encode the proteins given in AAY01602 and CC AAY11994 to AAY12260, respectively. The proteins given represent the CC signal peptide and an N-terminal fragment of a secreted protein. The CC nucleic acid sequences can be used for producing secreted human gene CC products. They can also be used to develop products for diagnosis and CC therapy. The proteins obtained may have cytokine activity, cell CC proliferation/differentiation activity, haematopoiesis regulating CC activity, tissue growth regulating activity, reproductive hormone CC regulating activity, chemotactic/chemokinetic activity, haemostatic and CC cativity, tumour inhibition activity or other activity, anti-inflammatory CC activity, tumour inhibition activity or other activities. The products CC can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion

Human protein

ID NO: 1344.

```
CC AAM25963. The proteins can have activities based on the tissues and CC AAM25963. The proteins can have activities based on the tissues and CC cells they are expressed in, such as: antiinflammatory; antirheumatic; CC antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; CC central nervous system; virucide; anti-HIV; fungicide; antimutagen; CC cardiovascular; antianemic; antiaggregant; haemostatic; vulnerary; CC antiulcer; osteopathc; demantological; antiallergic; antiasthmatic; CC antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; CC antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; CC antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; CC encoding them can be used in gene therapy, antisense therapy and vaccine CC groduction, The proteins and polynucleotides are useful for screening for CC agonists or antagonists of a protein and for the treatment and diagnosis CC of disorders associated with the activity of a protein e.g. inflammation, CC rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, CC contents of a cardiac dysfunction, autoimmunity, genetic diseases, haematopoietic disorders, antaponia, nurse, ulloars, thromboortropaonia, nurse, ulloars, and contents thromboortropaonia, nurse, ulloars, and contents thromboortropaonia, nurse, ulloars, and contents thromboortropaonia.

                                                                                                                                                                                                                                                                                                                                                 immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

          The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 18 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoletic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzhelmer's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; gene therapy; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive;
                                                                                                                                                                                                AAD08488-AAD08529 represent cDNAs corresponding to 18 human secreted protein genes, and AAE04199-AAE04239 represent the proteins they encode. AAE04240-AAE04297 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin ageing due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           detection; diagnosis; identification; cytostatic; neuroprotective nootropic; immunomodulatory; relaxant; contraceptive; gynaecolog antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic neural; immune system; muscular; reproductive; gastrointestinal;
